

“Langer worked with us to set up the schedule so we could start the project while school was still in session on work items that did not affect the school operations. This allowed us to complete the school portion of the project on time for school in the fall. We were able to maintain all of our church services, including daily mass, evening activities during construction. Langer accomplished this nicely!”

Deacon Jim Ramsey
Church of the Sacred Heart

This project involved the merger of three separate buildings: the church, school, and activity building with a common entrance and circulation addition. The addition included a generous gathering space with a wood beam roof system, an elevator installation to reach all levels of the buildings, four new classrooms, in addition to remodeling three others, and new school offices. Langer Construction also installed a fire sprinkler system and fire alarm system throughout the building and remodeled the main restrooms which are now handicap accessible.
