

This project consisted of major remodeling including the complete demolition of an area which previously consisted of coat rooms and hall ways. Following the demolition, this area was reconstructed into a new gathering space that joined the social hall and worship space. Once complete this large social area included high ceilings and clerestory windows.

The project also included handicap accessibility improvements consisting of an elevator addition, handicap restrooms on two levels, and a drive up-covered entrance with canopy. Finally, the lower level youth area was improved with the addition of an in-ground amphitheater giving it an exterior exit and outdoor performance space.
